DETAILED ACTION

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

Claims 1 and 3 have been allowed over the Link and Meyer prior art because they fail to teach the control signal enabling an operation point of the laser diode to both increase and decrease by a set percentage value and the bias generator circuit for generating the control-signal including a tri-state receiver; a single input applied to the tri-state receiver; said single input having a selected value of zero, high impedance, or one.

Claims 4-11 have been found allowable due to their dependency on claims 1 and 3.

Claim 12 has been allowed over the Link and Meyer prior art because they fail to teach a tri-state receiver, a current mirror coupled to the tri-state receiver for generating a control signal, the control signal applied to the automatic power control loop; the control signal enabling an operation point of the laser diode to both increase and decrease by a set percentage value; and an input signal being

applied to the tri-state receiver for selecting one of a normal operational mode, an increased set percentage value operational mode, and a decreased set percentage value operational mode.

Claims 13-18 have been found allowable due to their dependency on claim 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
